// 01 - TECHNOLOGY

Technology Stack

LANGUAGE

PHP 8.2

strict_types, clean OOP throughout

FRAMEWORK

Laravel 11

Auth, Mail, Sessions, Pagination built-in

DATABASE

MySQL 8

Products, orders, OTP tokens, sessions

AUTHENTICATION

OTP Passwordless

6-digit code, 10-min expiry, auto-register

FRONTEND

Blade + Bootstrap 5

Sticky nav, Owl Carousel, custom pagination

EMAIL (DEV)

MailHog

Catches all OTP emails locally at :8025

INFRASTRUCTURE

PRODUCTION

Docker Compose

Nginx · PHP-FPM · MySQL ·
MailHog

Vercel + PlanetScale

vercel-php runtime, external
MySQL

// 02 - ARCHITECTURE

How a Shop Request Travels Through the App

shop-request-lifecycle.php

```
// Customer visits GET /shop?search=mango&page=2
```

```
Browser      —→  Nginx (:8080)      // serves CSS/JS directly, forwards PHP
```

```
Nginx        —→  public/index.php  // Laravel front controller
```

```
// Middleware runs: EncryptCookies → StartSession → VerifyCsrfToken
```

```
// auth middleware checks if logged in (OTP session active)
```

```
Route::get('/shop', [ShopController::class, 'index'])
```

```
ShopController —→  reads $search from URL, calls repository
```

```
ProductRepository —→  Product::approved()->search($q)->paginate(12)
```

```
MySQL        —→  returns matching approved products, page 2
```

```
// Response travels back
```

```
$products —→ ShopController —→ view('shop.index') —→ HTML to browser
```

```
// Cart count shown in navbar reads from session — zero DB queries
```

```
array_sum($request->session()->get('cart', []))
```

// 03 - FEATURES

Everything a Customer Can Do

Authentication

- ✓ Enter any email — no password ever needed
- ✓ Receive 6-digit OTP by email (MailHog locally)
- ✓ Enter code in 6 individual digit boxes
- ✓ Account auto-created on first login
- ✓ OTP expires in 10 minutes — one use only
- ✓ Dev mode shows OTP on-screen (no SMTP needed)

Shop & Cart

- ✓ Browse all approved products with images and prices
- ✓ Search by product name or description
- ✓ Paginated product grid (12 per page, circular buttons)
- ✓ Add to cart, update quantity, remove items
- ✓ Cart stored in session — persists across pages
- ✓ Cart count in sticky navbar updates instantly

Orders

- ✓ Checkout with delivery address
- ✓ Order placed — status starts as Pending
- ✓ Order history page with 5 status tabs
- ✓ Tabs: All / Pending / In Process / Completed / Cancelled
- ✓ Tab shows live count of orders in each status
- ✓ Pagination preserves active status filter

UI Details

- ✓ Sticky white navbar — stays at top as you scroll
- ✓ Green topbar scrolls away with the hero image
- ✓ Owl Carousel on home page — arrows completely removed
- ✓ Custom circular pill pagination buttons
- ✓ Loading spinner hides until JS is ready
- ✓ Fully responsive (Bootstrap 5 breakpoints)

How the Two Core Flows Work

OTP Login — End to End

- 1 Customer enters email**
OtpLoginController validates format
- 2 OTP generated & saved**
6 digits, stored in otp_tokens with expires_at
- 3 Email dispatched**
OtpMail sent via MailHog (dev) or real SMTP (prod)
- 4 Customer enters code**
6 digit boxes, auto-focus, paste support
- 5 Token deleted immediately**
Cannot be reused. User::firstOrCreate() auto-registers new customers.

Cart → Order Flow

- 1 Add to cart**
CartController stores product ID + qty in session array
- 2 View cart**
Loads product details for session IDs — 1 query with whereIn
- 3 Checkout**
Address form, order total calculated from session cart
- 4 Order created**
Order + OrderItems saved to DB, cart session cleared
- 5 Track on orders page**
Filter by status tab, paginated with ?status= preserved

// 05 - SECURITY

Security Measures

THREAT	HOW IT IS STOPPED
OTP Replay	Token deleted immediately on successful verification. Hard 10-minute expiry enforced by expires_at column check.
SQL Injection	All queries through Eloquent parameterised builder — user-supplied ?search= value is never concatenated into raw SQL.

THREAT	HOW IT IS STOPPED
CSRF	@csrf on every cart/checkout/order form. VerifyCsrfToken middleware rejects requests without a valid token.
Stored XSS	Product descriptions strip_tagged on save. Blade {{ }} HTML-encodes all output. {!! !!} only used on pre-sanitised fields.
Session Fixation	session()->regenerate() on OTP login success. invalidate() + regenerateToken() on logout.
Privilege Escalation	Customers cannot access /products, /admin routes. CheckRole middleware + auth guard enforced on all protected routes.
Sensitive Env Vars	.env gitignored. .env.example committed (no secrets). Docker image never exposes .env. Vercel env vars set via dashboard.

// 06 - DEPLOYMENT

Local & Vercel Deployment

BASH - Local Docker setup

```
# Clone and enter
git clone https://github.com/vasant24konar/FruGo.git && cd FruGo

# Copy env (no edits needed for local Docker)
cp .env.example .env && bash deploy.sh

http://localhost:8080      # FruGo shop
http://localhost:8025     # MailHog - see OTP emails here
```

Vercel Production: Requires external MySQL (PlanetScale) + transactional SMTP (Resend/Mailgun). Set these env vars in Vercel dashboard:

REQUIRED

APP_KEY, APP_ENV=production

DATABASE

Generate key with php artisan key:generate --show

DB_HOST, DB_DATABASE, DB_USERNAME,
DB_PASSWORD

Point to PlanetScale or Railway MySQL

SESSION/CACHE

SESSION_DRIVER=cookie,

CACHE_STORE=array

Serverless needs no file writes

MAIL

MAIL_MAILER=smtp + host/port/user/pass

Use Resend, Mailgun, or SendGrid

// 07 - TEST ACCOUNTS

How to Test the Shop

HOW TO LOGIN	METHOD	NOTES
Customer	OTP – any email address	Go to /login-otp, enter any email, check MailHog at localhost:8025 for the code
Admin	admin@example.com / Admin@1234	Can update order statuses to test the status tabs

// 08 - REPOSITORY

Source Code

FruGo

Laravel 11 customer shop — OTP auth, cart, checkout, order tracking, sticky nav, Vercel-ready.
